Revised April 2000

EWC Goals

- Double market penetration of efficient fenestration products
- Help make NFRC labeling near-universal
- Educate the industry and market audiences on efficient technology
- Support Energy Star Windows

Revised April 2000

Who is the EWC?

Glass & Window Manufacturers

Testing Laboratories

Utilities & Municipalities

Fabricators & Extruders

Trade Associations

Other non-profit organizations

Lead Roles in the EWC

- Alliance: lead communications/ marketing activities
- LBNL: lead technical support efforts
- University of Minnesota/Carmody: information products & technical support
- Members: guide activity focus, support EWC activities

Windows and the IECC

- The IECC originally focused on saving heating energy
- Cooling energy use exceeds heating use in most parts of Texas
- Windows are the largest source of peak cooling loads
- The IECC contains a specific requirement for solar heat gain control through windows

Revised April 2000

Benefits of IECC Solar Heat Gain Standards

- Major reductions in cooling electricity use: estimated in the 20-30% range
- Significant reductions in air pollution emissions
- Major consumer savings in utility bills
- Improved consumer comfort

Calculating the Benefits of Solar Control Windows

Both Base house and IECC house:

- 2000 square feet
- 300 square feet of window area, equal orientations
- Air-source heat pump
- Other energy features meet IECC standards

Only difference is window glazing

- Both have double pane aluminum windows
- Base house uses clear glass, IECC house uses solar control low-e

Revised April 2000

Calculated Savings from Solar Control Windows

Results of the RESFEN analysis:

- 24% savings in cooling usage and costs
- .5 kW reduction in peak cooling load
- Permits about a half-ton reduction in cooling equipment sizing
- Equipment savings help offset window cost

Revised April 2000

Aggregate Cooling Impact Potential of the IECC in Texas

Utility Peak Load Avoidance

.5 kW X 100,000 homes per year =
500 MW of capacity after 10 years

Pollution Reduction (cooling energy)

850 kWh per home X 100,000 homes =
850 million kWh/yr after 10 years
= *about 4,000 tons of NOx annually*

Revised April 2000

Industry-based Support for IECC Adoption

- EWC members provided advocacy support during the legislative process, and in initial training and promotion activities
- Glass companies are working closely with Texas window manufacturers to help make the transition to low-solar-gain technology
- EWC members are supporting monitored demonstration projects in Houston and elsewhere
- Training will be available through Texas-based experts including Texas A&M, TBEI, plus the Building Codes Assistance project, Pacific Northwest National Laboratory, and EWC members

EWC's Relationship to other Public/Private Programs

NFRC

- EWC is separate from NFRC
- Membership overlaps

Energy Star Windows

- EWC supports Energy Star with education
- EWC also conducts broader activities; non-Energy Star products

Texas Window Initiative

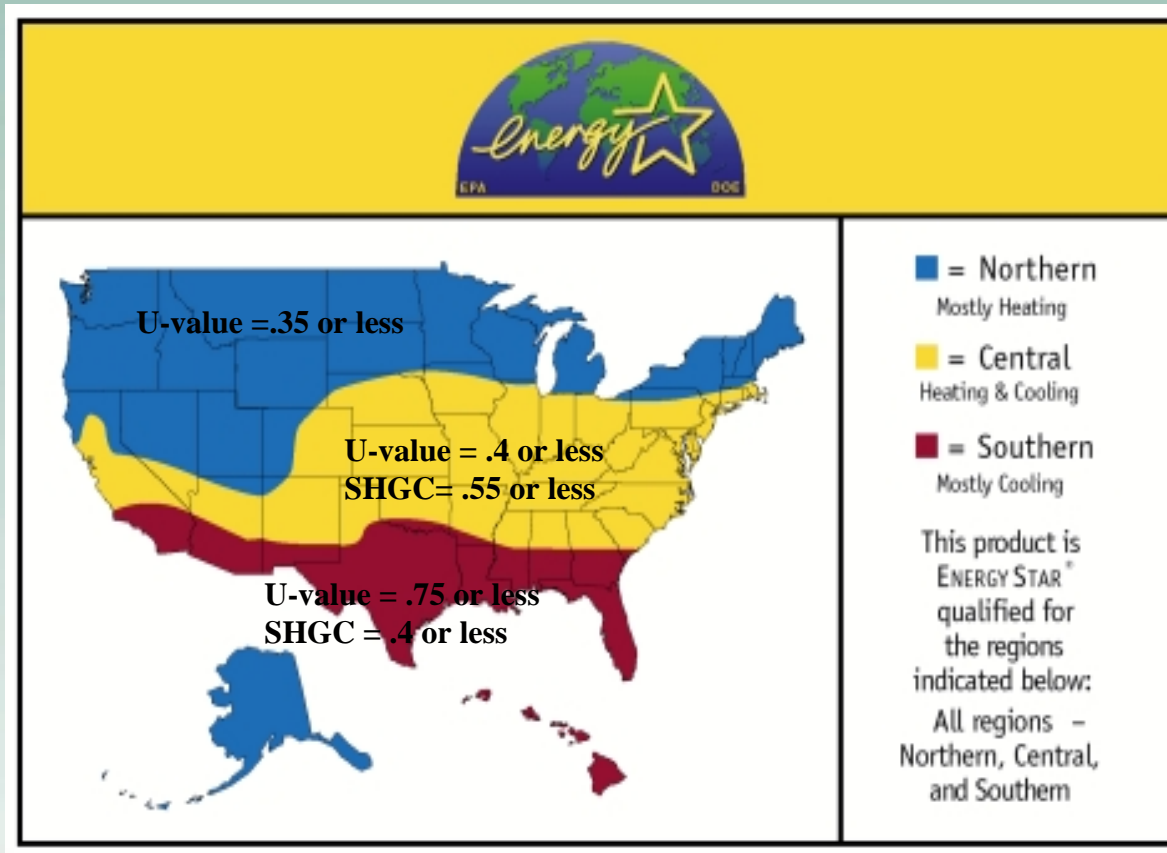

- EWC supports TWI via web, print, training

Look for the NFRC Label

World's Best Window Co.

Millennium 2000+ Casement
CPD#000-x-000

Vinyl-Clad Wood Frame • Double Glaze
Argon Fill • Low E • Solar Control Coatings

National Fenestration
Rating Council

CERTIFIED

ENERGY Performance

- Energy savings will depend on your specific climate, house and lifestyle
- For more information, call 1-800-123-4567 or visit NFRC's web site at www.nfrc.org

Technical Information			
Res	U-Factor	.32	Solar Heat Gain Coefficient
		.40	Visible Transmittance
		.58	
Non-Res		.31	
		.45	.60

Manufacturer stipulates that these ratings conform to applicable NFRC procedures for determining whole product energy performance. NFRC ratings are determined for a fixed set of environmental conditions and specific product sizes.
